EXPERIENCE

Software Development Engineer (SDE) - Intern | EduVantage Pvt. Ltd. **Jan 2026 – Feb 2026**

- Developed a full-stack AI-powered video assessment platform using **FastAPI, MongoDB,** and **React,** handling backend APIs and frontend integration.
- Built scalable REST APIs to manage assessments, tasks, video sessions, and scoring workflows in a production-oriented system.
- Integrated Gemini LLM for intelligent analysis and real-time feedback based on posture, pose, and user behavior during assessments.
- Implemented environment configuration and secure key management using **.env** files for AI keys, database, and application settings.

Full Stack Software Developer Intern | Spyn Technologies **Oct 2025 – Dec 2025**

- Developed full-stack web features using **Node.js**, **Express.js**, **React.js**, and **JavaScript**.
- Built REST APIs and integrated frontend components for scalable application workflows.
- Developed backend logic and integrated Generative AI features to enhance user interaction.
- Collaborated with development team using **Git and modern development workflows**.

PROJECTS

AI Commerce Suite — Intelligent Marketplace Platform | Node.js, MongoDB, RabbitMQ, Razorpay, ImageKit, Jest

- Designed and implemented a **microservices-based e-commerce backend** with independent services for Auth, Product, Cart, Order, Payment, and Notification.
- Integrated **RabbitMQ** for event-driven communication between services to ensure scalability and loose coupling.
- Built **secure JWT-based authentication** with role-based access and cookie management.
- Integrated **Razorpay, Nodemailer, and ImageKit** for payments, email notifications, and media management.
- Developed an experimental **AI Buddy service** to enable AI-powered product recommendations and user interaction.

Mango Disease Detection | Python, TensorFlow Lite, OpenCV, Flask, TinyML

- Built a CNN-based system to detect mango disease and deployed quantized models using TensorFlow Lite.
- Enabled offline, real-time inference on low-end smartphones using TinyML for rural farming use cases.
- Deployed a lightweight Flask API and optimized for < 300ms inference with minimal resource usage.
- Implemented image preprocessing and augmentation using OpenCV to improve robustness across real-world conditions.

ACHIEVEMENTS

- **Winner —ByteVerse Hackathon 2025 | AI Coding Platform** | Node.js, React.js, MongoDB, Redis, Generative AI
  — Built a real-time collaborative coding platform with AI-assisted code generation and task planning
  — Implemented JWT auth, Redis caching, and a responsive React frontend with Tailwind and Axios

SKILLS

- **Languages:** JavaScript, TypeScript, Python, Java, SQL, C
- **Frontend & Backend:** React.js, Next.js, Node.js, Express.js, REST APIs, FastAPI
- **Databases:** MongoDB, MySQL
- **AI & Tools:** Generative AI, Prompt Engineering, Gemini API Integration
- **Core Areas:** Full Stack Development, Data Structures & Algorithms, AI-Powered Applications

EDUCATION

Vishwakarma Institute of Technology, Pune **2022-2026**

BTech in Computer Science and Engineering (Artificial Intelligence) | **CGPA:** 8.27

12th — 84.8% (State Board)

10th — 89.6% (State Board)

PUBLICATIONS

Mango Fruit Disease Detection with Quantized DL Models - IEEE AIC 2025 (Accepted at IEEE Xplore)

- Innovated a CNN pipeline and deployed quantized DL models to achieve efficient real-time edge inference for mango disease detection.

Pomegranate disease using CNN and live image processing - (WorldS4 2025), London, UK

- This paper presents a live-image-based convolutional neural network(CNN) framework for detecting and classifying disease in pomegranate fruit in real time, proposed at the WorldS4 2025 conference in London.
